

# Company Profile

Safety Hub Egypt, has an extensive experience in Fire Protection Systems installation and wide various applications across different facilities including commercial, industrial, and residential industries.

---

## ■ About Safety Hub

**Safety Hub Egypt, has an extensive experience in Fire Protection Systems installation and wide various applications across different facilities including commercial, industrial, and residential industries.**

**Whatever you need, huge suppression systems installations or a residential fire sprinkler system installation, we have you safe and secured. Also we can design systems for even the most complicated industrial facilities to help protecting your facility.**

## ■ Our Mission

**Empowering communities through proactive fire safety solutions, we are committed to safeguarding lives, property, and the environment. With a focus on innovation, education, and unmatched service, we strive to be the trusted partner in fire prevention, detection, and response, ensuring a safer tomorrow for all.**

## ■ Health safety and the Enviroment

Proudly offers you the headlines upon which we can process that important process and going through it until we reach together the safe side putting you activities on a solid base on safety built on a professional technical and legal framework that complies with international safety framework represented by the ILO C 155/ R 164 and the ISO standard 45001 and also the Egyptian health and safety law No. 12/2003, that targets the level of ZERO loss or accidents.

## ■ Fire Protection Solutions

01

Diverse Expertise: Extensive experience in installing Fire Protection Systems for commercial, industrial, and residential sectors.

02

Tailored Solutions: Providing installations ranging from large suppression systems to residential fire sprinkler systems.

03

Custom Design: Ability to design complex fire protection systems for industrial facilities, ensuring optimal safety measures. Total Security: Ensuring that all installations are aimed at safeguarding facilities and occupants effectively.

04

Total Security: Ensuring that all installations are aimed at safeguarding facilities and occupants effectively.

**Our projects**

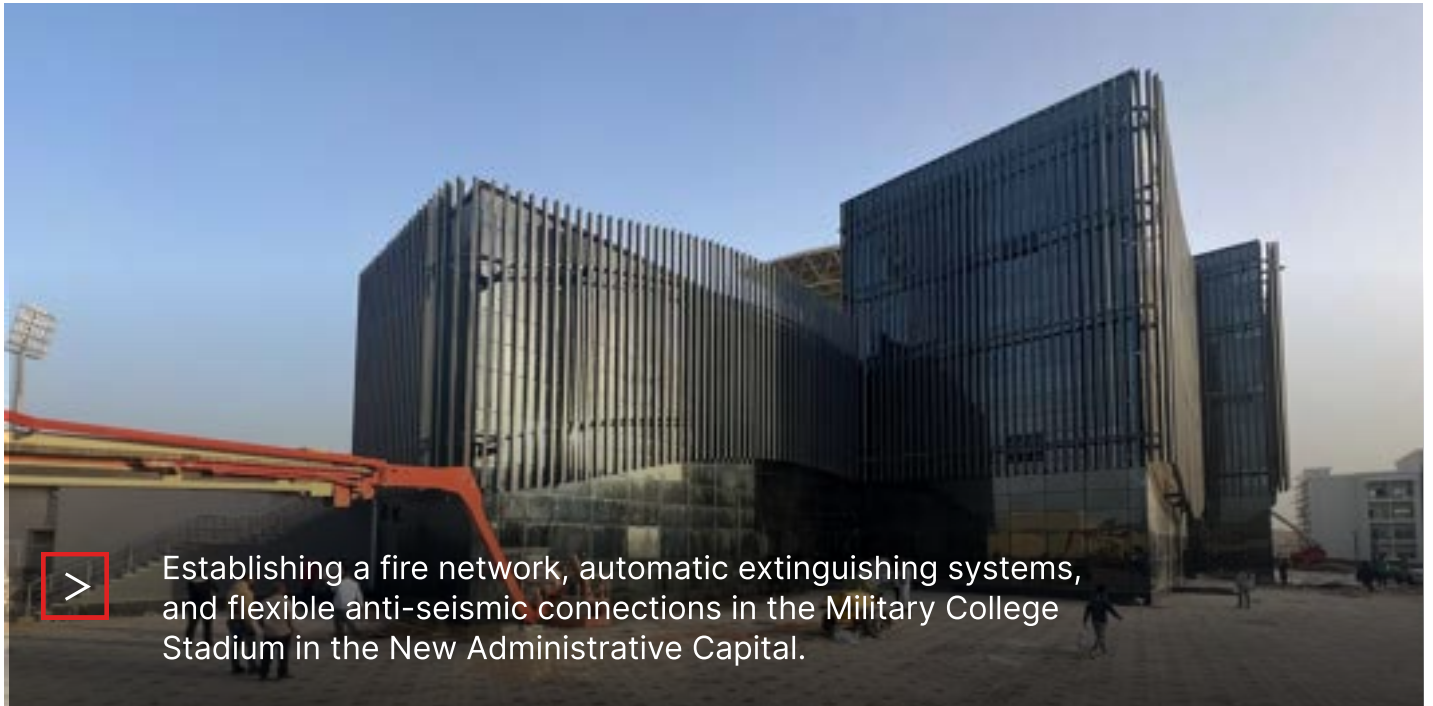

# The military college stadium in the new administrative capital

Our projects

# The military college stadium in the new administrative capital

**Our projects**

# Gemsa Oil

At SafetyHub, we take immense pride in securing the lifeblood of operations for companies like Gemsa Oil.

we've shielded Gemsa's MCC rooms and battery room from potential fire hazards. Our commitment to safety runs deep, and we're honored to be the guardians of businesses that drive our world forward.

Our projects

# Red Sea Factories Group

01

Establishing the Company's fire safety policy that sets out the organization's aims including the General Statement of Intent, the Organizing section, and the Arrangements section with regard to the health and safety policy.

02

Establishing a new culture making all manpower of the factories well trained as firefighting teams and training them on a regular time basis to keep them always alert and ready facing any fire incident.

03

Designing storage plans for miscellaneous commodities in all storage locations according to the NFPA codes.

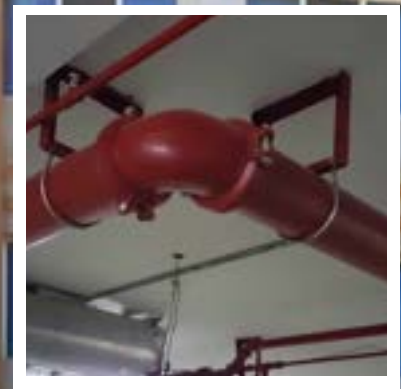

Our projects

# Salahaldin international school

Establishing a fire network and addressable fire alarm for the school and its theater, as well as securing electrical rooms with various automatic fire fighting systems.

# Al Azizia Mall

Our projects

# Tirana Dahab Hotel

## Our projects

# Genena City

In cooperation with Safety First we delivered Genena City project on December 1st, 2020. This is scheduled to take place after finishing the first phase: which is covering an entire floor in both the mall and the hotel garages with a complete automatic fire extinguishing network. The garages design follows the Egyptian and international codes.

The design of the network consists of 10,000 meter standard pipes compliant with all relevant specifications.

We only took 60 days to carry out all installation work and pressure tests in line with the global codes and in preparation for the commencement of the second phase, which is dedicated to completely changing and up heaving the old pump room in order to install a set of pumps of higher efficiency that are brought in from Bristol, the acknowledged international company before the fire department as well as internationally.

Such pumps have the capacity of 1000 gallons per minute and are able to automatically raise the pressure up to 25 bars, feeding the complete area in no time.

In addition, these pumps are equipped with Tornatech touch screen control panels that make them extra user- friendly and they are subject to periodic tests every 15 days that are supervised by a special committee of senior officials from the fire department in South Sinai Governorate.

This will be followed by the third phase represented in linking the five floors together and replacing the old pipeline network with an approved one in only 70 days. Thus, we would establish the most secure establishment in terms of fire- protection in Sharm El Sheikh, all in preparation for the launching of both the mall and the entire hotel.

# Our Services

# ■ Protecting spaces

Safety Hub Egypt, has an extensive experience in Fire Protection Systems installation and wide various applications across different facilities including commercial, industrial, and residential industries.

Whatever you need, huge suppression systems installations or a residential fire sprinkler system installation, we have you safe and secured. Also we can design systems for even the most complicated industrial facilities to help protecting your facility.

# ■ Fire fighting systems installations

## Step by Step, With You

Leveraging Safety Hub Egypt high industry expertise, we provide Fire Protection System Installation Services. Our team of experienced engineers, support personnel and employees, provide a widely admired system installation services. Also, our clients are always pleased to know that our full installation process is done step by step.

Safety First Egypt is a turnkey fire protection solutions provider. We provide the installation of new fire protection systems including but not limited to fire alarms, fire detection, sprinkler and fire suppression systems. Providing you with peace of mind, Our engineers design fire protection and suppression systems that are specific to your facility, that will detect and respond to fire conditions to ensure the safety of your occupants and reduce the damage to your facility.

# ■ Fire fighting systems Design

## Systematic Fire Protection

Safety Hub Egypt doesn't just design sprinkler and fire alarm systems. We design fire protection systems with full facility approach—studying and understanding the whole facility inside and out, to provide a more safe and cost-effective systems design based on full understanding of the facility's overall fire and life safety features and requirements.

Safety First Egypt, the protection experts have organized technical approach to fire protection systems design needed for your facilities and projects. Assess, Conceptualize, Simplify and deliver. Shortly, we design to code compliance tailor made for you.

# ■ Maintenance and Inspection

## People's Life Matters...

Safety Hub Egypt, helps you to reevaluate effectiveness & relevance of your system. This implies that it is the basis for maintaining basic and essential fire and life safety system. Regular testing is required to validate fire protection system functionality. Testing is performed by operating all system components to assure it performs as required in the case of an actual emergency event. A proper testing should test all Emergency Control Functions in the system. Also, maintenance is necessary to keep system operating properly. Service team should notify system owner immediately whenever defects are found during regular testing & inspection processes.

# ■ Training & Systems Operation

## System Operating

Safety Hub Egypt provide the hassle-free system operating service to make your life even easier. Our certified fire safety engineers, technicians, architects and all involved personnel have comprehensive regular trainings. Our engineers ensure the proper operation of your fire protection system from planning and manufacturing to implementation, inspection and maintenance. We Make sure your fire protection system goes smoothly and accurately keeping your assets, employees and community safe! In brief, Our competent and qualified fire safety team will help you having hassle-free system management!

## Training

Professional fire protection system depends on the team behind. Team must be well-trained to inspecting, maintaining and operating systems. Our expert instructors conduct comprehensive training based on excellent qualifications, extensive experience and professional competences. We wide range of seminars and in-house trainings according to your industry and unique individual needs as well. Our training services helps your systems and strategies complying with standards and regulations.

# ■ Fire Fighting Equipment Supplies

Quality matters ..

Some of our supplies, listed below: Fire Suits, Helmets & Gloves Dry Powder Extinguishers Water Extinguishers Wet Chemical Extinguishers Foam Extinguishers Hoses, Reels & Cabinets and much more...

# ■ Expansion joints installments

Also known as movement joints or expansion gaps, are structural features used in construction to accommodate the movement and thermal expansion of materials such as concrete, metal, or composite materials. These joints provide flexibility and allow for the expansion and contraction of building components due to temperature changes, moisture variations, seismic activity, or other factors.
